VOLEY PLAYA MADRID – Distribuidor oficial de Vincere Sand Socks

Sand Socks were designed for use by both the professional and the casual beach or water sports athlete. Sand Socks provide protection and comfort for the occasional visitor to the beach or water while providing enhancement of an athlete's athletic abilities in the surf or sand.

By protecting the soles of your feet from the hot sand, cold sand, dirt, mud, and stray objects, Sand Socks not only allow you to enjoy your outdoors comfortably, but safely. The rashguard ankles help to prevent blisters from diving fins or other outer footwear. Although Sand Socks will provide a small level of protection to minor beach hazards such as small rocks, weeds, or rough objects, they are not designed for continuous exposure to such hazards. When dealing with rough surfaces, Sand Socks should be worn with shoes or sandals.

VINCERE SPORTS COMMITMENT TO QUALITY

Vincere Sports, Inc. has an unwavering commitment to quality for all of our products. Sand Socks take rigorous abuse on gritty, abrasive sand, being stretched and pulled in every direction, with exposure to sun, heat, water, and corrosive, salty seawater. That is why we manufacture our Sand Socks in the US with only trusted, experienced manufacturers. Following are some of the ways that Vincere Sports' maintains superior quality as the preferred beach sock for professional and casual athletes alike:

- NEW, TOUGHER SOLE

Our recently introduced tougher sole retains the same comfortable fit, while stronger on the bottom resisting abrasions from heavy sand or occasional rough objects and surfaces. Unlike the non-stretchable epoxy-coated soles of other beach socks or water booties, Sand Socks are still form-fitted to your feet for optimized use on sand, not on hard or rough surfaces.

- QUALITY UV RESISTANT LYCRA

We use only the highest quality lycra with an Ultraviolet Protection Factor of 50+. Our lycra comes from Brazil and Italy where the highest quality, 4-way stretch, comfortable fit lycra is manufactured.

- MADE IN THE USA

Vincere Sports, Inc. uses only trusted and proven American manufacturers for our Sand Socks. Our primary manufacturing sources have decades of experience serving the wet suit, water sports, and dive equipment industries. Competing products using cheaper offshore suppliers lack quality in both workmanship and materials.

- TOP QUALITY THREADS AND STITCHING

Vincere Sports uses only threads made in the USA in the manufacturing of our Sand Socks. Asian manufacturers will, of course, use threads and other materials from their lower quality Chinese suppliers. For additional reliability, we employ a superb 4-needle locking flat stitch using 6 threads, unlike lower quality processes, such as 3-locking stitches.

- OUR QUALITY GUARANTY AND WARRANTEE

Vincere Sports proudly stands behind all of its products with a warrantee against all defects in materials and workmanship. We accept any returns up to 6 months from the date of sale for this purpose for immediate replacement.

PLAY MORE WIN MORE

In addition, Sand Socks will enhance the abilities of the athlete on the beach or in the water. Sand Socks give better traction in the sand and the ability to jump high and respond faster. Sand Socks cover the feet, integrating the toes together, much as "webbing" does for amphibians. By eliminating the open space between toes, without adding additional bulk or weight, Sand Socks provide a better platform on the sand and as a result, give more traction and surface area to the athlete, decreasing physical response time and allowing the athlete to jump higher on the sand.

SAND SOCKS PROTECT FROM:

Hot Sand
Cold Sand
Dirt & Mud
Sun
Blisters & Rashes

SAND SOCKS ENHANCE PERFORMANCE ALLOWING THE ATHLETE TO:

Jump higher
Move faster
Have breathability under the socks
